

FUN IN THE WATER

Monsoon time in Kolkatta

Floods affect more people every year than all other natural and technological disasters put together. The damage caused by floods to people and property across the world has been extremely severe in recent decades. Today, with growing population, there is great pressure on water sources and the number of people living in their proximity is increasing, as are flood risks. There is a connection between global climate change and the increasing frequency of floods around the world. A number of initiatives are being taken to manage floods.

View great examples of videos on flood management on www.thewaterchannel.tv, an online video channel on water. TheWaterChannel takes you on a multimedia tour around the world of water!

TheWaterChannel is a partnership between MetaMeta, UNESCO-IHE, Cap-Net and Nymphaea.
