

# 4's

Play with 3 or 4 players. Age: 7+

What is the goal?

To collect as many series of four cards, also called 'quartets', as possible.

Gameplay?

The cards (28 in total) are shuffled and four cards are given to each player. The cards that remain are put in the center of the table. The dealt cards are held face up in a player's hand so that only the person who holds the cards can see them. The youngest player can start with the game, by asking another player if they had a certain card (example, card category "Safe Food" – Wash vegetables) which would help the player create a quartet. If the player does have the card, then they hand it over. If the player doesn't, then it becomes her or his turn to ask and the person who asked draws one card from the center of the table.

When a quartet is created, or a complete quartet was dealt, then the cards creating the quartet are placed in front of the player and the player says: quartet! The game ends when all the quartets have been created. The winner is the person with the most quartets.
